

# AI-Augmented Enterprise Document Search

An AI search layer across your documents and repositories that returns precise answers instead of a list of files to dig through.

## Give your teams accurate, contextual answers from across the enterprise, without hunting through disconnected systems.

Most enterprise search is still fundamentally broken. Teams chase down information across SharePoint, Confluence, file drives, ticketing systems, and internal databases, and even when they find what they are looking for, they still have to read through it to extract the answer. This engagement replaces that experience with an AI search layer that understands context and returns precise, sourced answers.

- AI search layer connected to your existing data sources, repositories, and document systems
- Customized search experience tuned to your use case, from legal research to customer service
- API integrations feeding into broader AI workflows and tooling
- End-to-end data source mapping and indexing
- Workflow documentation for ongoing administration and extension

**Timeline:** 2 to 4 weeks to production.

**Pricing:** Scoped per engagement. Contact us.

## Get Started Today

### Customer Commitment

- Technical stakeholders for data source mapping and provisioning
- Business stakeholders to define and evaluate search requirements
- Availability for kickoff and pre-go-live validation

### Who Should Participate

- IT and infrastructure leads
- Operations or knowledge management stakeholders
- Business unit leads

### Benefits

- Contextual answers that cut time spent searching
- Single interface across fragmented enterprise systems
- Compounds the value of existing AI investments

### Deliverables

- Deployed AI search solution connected to your data sources
- Customized search experience for your primary use case
- API integrations for AI workflow connectivity
- Workflow support documentation
