

AI Assessment

We map priorities to AWS data and AI patterns, score your readiness gaps, design the architecture, and deliver a phased roadmap with a cost-benefit case.

Four weeks to a scored readiness assessment, an AWS architecture, a phased roadmap, and an ROI case.

We begin where you are. Business priorities if you're asking whether AI can solve a specific problem. Infrastructure priorities if you're asking how to fix your data and API foundations. From there, we map your needs against AWS data and AI patterns, score the gap between where you stand and where you need to be, and design an architecture to close it.

You leave with a phased roadmap: quick wins in the first three months, foundations by six, advanced capability by twelve. Plus a cost-benefit case written for the room where budgets get approved.

- Two entry points: business use cases or CTO infrastructure priorities
- Twelve AWS data and AI patterns, with governance applied
- Readiness scorecard that scores your gaps pattern by pattern
- Architecture recommendation & a 0-3-6-12 month roadmap
- Cost-benefit case that leadership can act on

Timeline: 2-4 weeks from kickoff to readout.

Pricing: AWS assessment funding for qualified customers. Fixed price otherwise.

Customer Commitment

- Executive sponsor access for discovery and readout
- Stakeholder interviews across business and technical teams
- Visibility into your current data estate and priorities
- Intent to act on findings within 3 to 6 months

Who Should Participate

- The executive who owns the AI mandate: VP, business line owner, or CTO
- A data or platform lead who knows the estate
- A finance stakeholder for the ROI case

Benefits

- Decision visibility in four weeks
- Gaps scored before you spend
- AWS funding covers qualified customers

Deliverables

- Assessment report
- Data and AI readiness scorecard across the identified patterns
- AWS architecture recommendation
- Phased roadmap: quick wins, foundation, advanced
- ROI report
- Executive readout session
