

# Workflow, Handled

Name the process that eats your team's week. We hand it back, AI-automated, running in your AWS account, with the paper trail your auditors demand.

## One painful workflow, automated end to end in three to four weeks. You pick, we build it with AI-DLC. Fast.

Every ops team has a workflow nobody wants to touch. Manual handoffs. Copy-paste between systems. A spreadsheet one person keeps alive. This engagement retires it, and we use the AWS AI-Driven Development Lifecycle (AI-DLC) methodology to get there in weeks instead of months. This method takes your process from plain-language description through requirements, design, and build, capturing each decision along the way.

We map how the work happens today, build the automation with the people who own it, deploy it in your AWS account, and test against real cases before handoff.

- One workflow, scoped with you in a brief discovery session
- Built in weeks, not months. AI-DLC does the heavy lifting
- Deployed in your AWS account on Bedrock & AgentCore
- Human sign-off wherever judgment matters
- Tested against real cases before it goes live

**Timeline:** Three to four weeks, kickoff to working automation.

**Pricing:** Fixed price. AWS funding may apply.

## Get Started Today

Contact us at [sales@newmathdata.com](mailto:sales@newmathdata.com) to schedule an introduction.

### Customer Commitment

- Your workflow experts, a few hours a week
- Sample cases and access to the systems involved
- AWS account access for deployment
- A decision maker for scope calls

### Who Should Participate

- The manager who owns the workflow
- Two or three people who run it today
- An IT contact for account access and deployment

### Benefits

- Hours back every week, from the process that costs you most
- Faster than a hand-built project, AI-DLC speeds up the work
- A documented paper trail that survives audits

### Deliverables

- Current and future state of the workflow, documented
- Working automation, live in your AWS account
- Requirements and design record from the AI-DLC process
- Runbook plus a handoff session for your team
- A shortlist of what to automate next
